MILESTONE TECHNOLOGIES · PHARMA CLIENT ENGAGEMENT

Govern the next decision, not just the next sprint.

Application for the nine-month remote Program Manager engagement supporting an AI Transformation Office across pharmaceutical R&D.

Dear Alicia Loerzel and Hiring Team,

The engagement calls for someone who can run agile delivery with technical teams in the morning, reconcile roadmap and budget tradeoffs in the afternoon, and give senior governance a concise, credible view of value and risk before the day ends. That combination is the center of my operating experience.

At Vape-Jet, I currently lead AI-first operating transformation across production, quality, purchasing, customer success, support, engineering issue flow, ERP, CRM, collaboration platforms, telemetry, and a software-enabled fleet of approximately 1,000 fielded robots. Through DudeWorth, I develop AI-readiness and opportunity frameworks that connect value, data readiness, feasibility, governance, human authority, adoption, and measurable operating outcomes. Earlier, I led scaled launch and operating mechanisms at Amazon and complex R&D, engineering, manufacturing, quality, and customer-delivery programs at Compunetics.

I would approach the four-workstream portfolio as a common decision protocol rather than a uniform project template. Each workstream should move at its legitimate scientific and technical tempo, while sponsors see the same six fields: value evidence, data/model readiness, human and quality authority, spend and forecast, dependencies, and adoption ownership. That makes steering forums useful because they can decide what to advance, re-plan, escalate, or hold without mistaking sprint activity for decision readiness.

My cross-domain background is an advantage in this assignment. I have repeatedly entered specialist environments, learned the authority model quickly, and connected technical work to operating decisions without flattening expert judgment. My University of Pittsburgh grounding in materials science, physical chemistry, and biology-related studies strengthens the questions I ask; my high-reliability and regulated operating experience keeps quality, risk, and human authority visible; and my current AI work keeps the program grounded in real workflows rather than AI vocabulary.

The independent candidate vision at https://russelldudek.github.io/Milestone/ makes that reasoning visible through an interactive AI Portfolio Protocol, a 90-day entry plan, and a practical steering-review packet. It is intended as a discussion artifact for how I would make the portfolio easier to govern and easier for teams to deliver.

Milestone's published emphasis on embedding delivery teams, combining program governance with adaptable methods, and moving AI from proof to sustainable adoption aligns strongly with how I operate. I would be ready to contribute quickly from the East Coast and support global scheduling while actively relocating from Pittsburgh to the Tampa Bay area.

ROADMAP & ECONOMICS	GOVERNANCE & DELIVERY	ADOPTION & TRANSFER
One reconciled view of commitments, forecast assumptions, ranges, and sponsor decisions.	A cadence that connects sprint evidence to decision rights, risks, dependencies, and executive action.	Ownership, workflow change, training, feedback, and durable mechanisms built into delivery.

Respectfully,

Russell Dudek
