

ONE-PAGE OPERATING ARTIFACT

Decision-led portfolio review

Use one copy per workstream, then aggregate exceptions and cross-workstream tradeoffs for the steering forum. Illustrative structure; adapt to client quality, data, privacy, and governance standards.

Review field	Evidence / update	Decision implication
Outcome and value Owner · baseline · measure	What changed in the value hypothesis? What evidence exists? What remains an assumption?	Advance, reframe, or stop the outcome commitment
Data/model readiness Access · quality · evaluation · monitoring	What condition is now true? Which gap blocks the next stage? Who owns remediation?	Proceed with controls, hold, or escalate
Human and quality authority Use · override · exception · approval	Who may rely on the capability? Where is human review mandatory? What evidence does quality require?	Clarify authority before expanding scope
Spend and forecast Actual · forecast · range · trigger	What changed, why, and what decision changes the forecast?	Maintain, reallocate, reduce, or request sponsor decision
Dependencies Team · vendor · system · data · control	Which dependency is on the critical path? What is the next action, owner, and due date?	Re-plan sequence, escalate, or accept risk
Adoption ownership User · workflow · enablement · sustainment	What will change in real R&D work? Who owns use and learning after delivery?	Continue, narrow, or pause until ownership exists

STEERING DECISION RECORD

Decision required	Recommendation	Decision owner	Due

PORTFOLIO EXCEPTIONS

- Cross-workstream dependency or resource conflict:
- Budget/forecast movement requiring sponsor action:
- Quality, compliance, privacy, or data-governance escalation:

LEARNING TO CARRY FORWARD

- Reusable pattern:
- Assumption disproved:
- Mechanism to change:

Review rule

Do not spend steering time reading status. Spend it resolving exceptions, tradeoffs, and commitments that teams cannot resolve alone.
