

Operator-technologist who makes complex work visible and governable. Leads multi-workstream technical and AI-enabled transformation across operations, engineering, quality, data, systems, and customer workflows. Builds decision cadences that connect roadmap, budget, risk, dependencies, adoption, and measurable outcomes.

SELECTED EXPERIENCE

Vape-Jet

2025-Present

Director of Operations

- Leads AI-first operating transformation across production, purchasing, quality, customer success, support, engineering issue flow, ERP/Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows.
- Connects factory, field, customer, and machine-fleet signals into prioritized work, earlier risk detection, cleaner handoffs, dashboards, standard work, training, and accountability.
- Works directly in a software-enabled robotics and machine-vision environment with approximately 1,000 fielded robots informing support and operating feedback loops.

DudeWorth

2017-Present

Founder / AI and Automation Advisor

- Develops AI-readiness and opportunity frameworks that assess value, feasibility, data readiness, governance, adoption burden, reuse, and time-to-value.
- Designs agentic workflow patterns using structured context, retrieval, AI agents, human judgment, escalation, decision records, evaluation, and governance rails.
- Advises on AI-enabled operations, logistics technology, warehouse automation, AMRs, ASRS, cobots, transportation systems, network analysis, and workflow design.

Amazon

2014-2018

Operations Management / Site Leader

- Led launch and execution for Amazon Prime Pittsburgh in a 24/7 customer-backward environment supporting approximately five million second-day orders annually.
- Built leadership routines, labor planning, throughput visibility, escalation paths, standard work, and operating mechanisms across safety, quality, flow, customer experience, and team engagement.
- Served on the Amazon Prime Now launch team with Whole Foods and applied Lean and Gemba practices to scaled execution.

Compunetics

2000-2013

Director of Operations and Engineering Management

- Progressed through R&D program management, production management, strategic acquisition, operations management, and director-level leadership.
- Led engineering, manufacturing, quality, customer delivery, and complex technical programs in advanced electronics and high-reliability environments.
- Built quality systems, standard work, root-cause practices, performance measures, and process controls; collaborated with DoD, CERN, Intel, and AMD.

MANDATE FIT

- Multi-workstream programs
- Roadmap governance
- Budget & forecast
- Executive reporting
- Agile / Kanban
- Risk & dependencies
- Change adoption
- AI / ML workflow
- Quality systems
- Vendor coordination

PROGRAM MECHANISMS

Governance: sponsor forums, decision rights, escalation, decision records.
Delivery: roadmaps, backlogs, stand-ups, reviews, retrospectives, Kanban flow.
Economics: baseline, forecast, variance narrative, capacity and tradeoffs.
Adoption: workflow integration, training, human authority, feedback, sustainment ownership.

SCIENTIFIC GROUNDING

University of Pittsburgh B.S. Academic grounding includes materials science, physical chemistry, and biology-related studies. Candidate-provided Google Scholar profile: scholar.google.com/citations?user=yHQSvd8AAAAJ

Role-specific thesis

Standardize the decision evidence across four workstreams without standardizing away the science.

GOVERNANCE Decision rights, sponsor forums, risk escalation, decision records, and accountable owners.	ROADMAP & ECONOMICS Milestones, budget baseline, actuals, forecast assumptions, capacity, ranges, and tradeoffs.	DELIVERY Backlogs, flow, stand-ups, reviews, retrospectives, standard work, and dependency action.	ADOPTION Workflow integration, training, human authority, feedback, and sustainment ownership.
